

Curriculum Vitae
Sushant Bhatnagar, Ph.D.

Assistant Professor of Medicine
Division of Endocrinology, Diabetes, and Metabolism
University of Alabama at Birmingham
Email: sushantbhatnagar@uabmc.edu
Office: 205-996-0164
Fax: 205-996-5220

Education

- 2008 Ph.D., Biochemistry and Molecular Biology, West Virginia University, Morgantown, WV.
Concentration: Biochemistry and Molecular Biology
Thesis Title: Fibroblast growth factor-19 inhibits hepatic fatty acid synthesis.
Thesis Advisor: Dr. Frank B. Hillgartner
- 2001 M.Sc. (Hons), Chemistry, Panjab University, Chandigarh, India.
Concentration: Physical Chemistry
Project Title: Study of Ground Water Quality in the Nawashahar Region of Punjab.
- 1999 B.Sc. (Hons), Chemistry, Panjab University, Chandigarh, India.

Academic Appointments

- 2016– Member, Diabetes Research Center, University of Alabama (UAB), Birmingham, AL.
Present
- 2016– Member, Nutritional and Obesity Research Center (NORC), University of Alabama,
Present Birmingham, AL.
- 2016– Associate Scientist, UAB Center for Exercise and Medicine, University of Alabama,
Present Birmingham, AL.
- 09/2015– Assistant Professor of Medicine, Division of Endocrinology, Diabetes, and Metabolism,
Present University of Alabama, Birmingham, AL.
- 06/2012– Assistant Scientist, Department of Biochemistry, University of Wisconsin, Madison, WI.
08/2015 *Research Mentor: Dr. Alan D. Attie*
- 01/2009– Research Associate Postdoctoral Fellow, Department of Biochemistry, University of
06/2012 Wisconsin, Madison, WI.
Research Mentor: Dr. Alan D. Attie

Research Interests

- 1) Mechanisms of insulin secretion from the pancreatic islets in obesity and type 2 diabetes.
 - a) The role of Tomosyn family of proteins in regulating insulin secretion and glucose homeostasis. We positionally cloned Tomosyn-2 under a fasting glucose quantitative trait locus and demonstrated that genetic alterations in the Tomosyn-2 gene increase susceptibility to type 2 diabetes. We also showed that Tomosyn-2 is among the few known endogenous inhibitor of insulin secretion that functions by decreasing the ability of insulin granules to fuse to the plasma membrane. Our data show that Tomosyn-2 acts a major hub in beta cells that integrates the nutritional and genetic cues to modulate the proximal steps (SNARE complex) of the fusion of the insulin granules to the plasma membrane affecting insulin secretion. Additionally, we are investigating the essential role of Tomosyn-1 in insulin secretion and type 2 diabetes. Using biochemical and cell biology-based approaches in primary cells and knockout mouse models our laboratory is

understanding the role of Tomosyns proteins in regulating whole-body glucose metabolism in lean and obese.

- b) The role of secreted proteins C1ql (1-4) and G-protein coupled receptors BAI signaling pathway in insulin secretion. We discovered a novel C1ql3 secreted protein signaling pathway to affect glucagon-like peptide-1/cyclic adenosine monophosphate stimulated insulin secretion from pancreatic β -cells. We showed that C1ql3's adhesion G-protein coupled receptor, BAI3 mediates the inhibitory effects of C1ql3 on insulin secretion. Our laboratory is interested in understanding the role of this yet-undescribed C1ql3-BAI3 signaling pathway in β -cells. function. Additionally, we seek to understand the role of C1ql and BAI family of proteins in type 2 diabetes.

- 2) Identification and characterization of novel secreted protein regulators of obesity, age, and genetics that affect the function of key metabolic tissues.

Development of methodology to screen for secreted proteins in the tissue of origin and determine their function in the target tissue. The goal of this project is to develop a whole-body secreted protein network that will affect islet function with the variation in obesity, age, and genetics in mice and humans. This analysis combines the unique strategy of gene/protein expression profiling with the coexpression network-based approaches to identify secreted protein regulators and determine their tissue-specific function. This methodology serves as a 'hypothesis-generating' platform that expedites the screening of secreted proteins and generation of tissue-specific hypothesis for each candidate secreted protein. We have applied this approach to identify C1ql3 signaling pathway with therapeutic potential to affect insulin secretion from the β -cell of islets. The long-term objective of this project is to gain insights into tissue function during the pathophysiology state and identify novel therapeutic targets for drug discovery.

Honors and Awards

- | | |
|------|---|
| 2018 | Poster 1 st Place: Darwin Day UAB, Mentor (with Trung Huynh). |
| 2018 | Oral Award 1 st Place: 17 th Annual UA Honors Systems Research Conference, Mentor (with Trung Huynh). |
| 2018 | Goldwater Institutional Nominee, Mentor (with Trung Huynh). |
| 2017 | Oral Award 2 nd Place: UAB Fall Expo, Mentor (with Trung Huynh). |
| 2017 | Southeastern Medical Scientist Symposium Travel Grant @Emory (Funded by NIH/NIGM), Mentor (with Trung Huynh). |
| 2017 | Oral Award 2 nd Place: UAB Summer Expo, Mentor (with Trung Huynh). |
| 2017 | Oral presentation award (3 rd place), 2017 Midwest Islet Club conference, Mentor (with Trung Huynh). |
| 2017 | UAB Honors College Experiential Fellowship Program, Mentor (with Trung Huynh). |
| 2017 | One of the top abstracts at the conference. Young Investigator Travel Grant Award to American Diabetes Association 2017, San Diego, CA. |
| 2012 | Keystone Scholarship: Pathogenesis of Diabetes: Emerging Insights into Molecular Mechanisms (J8), Santa Fe, NM; Jan 29- Feb 3, 2012. |

- 2008 Best Poster Award: 2008 FASEB Summer Conferences: Molecular Mechanisms Involved in the Nutrient Control of Cellular Function, Carefree, Arizona; July 20–25, 2008.
- 2008 Best Poster Award: 2008 E. J. Van Lier Convocation and Research Day, West Virginia University, WV.
- 2008 Top 10 Abstracts for Oral Presentations – 2008 E. J. Van Lier Convocation and Research Day, West Virginia University.
- 2008 Pfizer Global Research and Development Scholarship Award: Keystone Symposia on Diabetes Mellitus, Insulin Action, and Resistance (A6), Breckenridge, CO; January 22–27, 2008.
- 2008 Graduate Student Travel Award, School of Medicine, West Virginia University, WV.

Funding

- 04/2019–03/2024 1R01 DK120684-01, Sushant Bhatnagar (PI), NIDDK, NIH; The role of Tomosyn-2 in insulin secretion and glucose tolerance. Scored 15th percentile.
The goal of this grant is to investigate the role of Tomosyn-2 in regulating whole body glucose homeostasis.
- 01/2018–01/2021 ADA Grant #1-18-PDF-103; American Diabetes Association Postdoctoral fellowship, Mentor, (With Rajesh Gupta (PI)); C1qI3 inhibits GLP-1 incretin-induced insulin secretion by Bia3 adhesion G-protein coupled receptor in pancreatic beta cells.
- 05/2017–05/2019 5P30DK079626-10; UAB DRC Pilot and Feasibility grant award, Sushant Bhatnagar (PI); The role of C1qI3 secreted protein in insulin secretion from pancreatic islets.
The goal of this study that is supported by UAB DRC Pilot and Feasibility grant award is to generate preliminary data to obtain major funding on the project.
- 2016–2019 4R00DK095975-03, Sushant Bhatnagar (PI), NIDDK, NIH, The role of tomosyn-2 in insulin secretion.
The goal of this study is to identify the mechanisms that regulate the functional activity of tomosyn-2 in insulin secretion and mechanism by which Tomosyn-2 regulates insulin secretion.
- 2014–2015 K99 NIH Pathways to Independence award (1K99DK095975-01), Sushant Bhatnagar (PI), NIDDK, NIH, The role of tomosyn-2 in insulin secretion.
The goal of this project to identify cell signaling pathway that regulates Tomosyn-2's ability to inhibit insulin secretion in pancreatic beta cells.
- 06/ 2011–06/2012 American Diabetes Association Mentor-Based Fellowship 7-11-MN-03 07/01/11-06/30/15.

Educational Activities and Presentations

Classroom Teaching

- 2016–Present Noon conference, Division of Endocrinology, Diabetes, and Metabolism, UAB.
- 2016–Present Endocrinology Grands Rounds, UAB.
- 01/2014–05/2014 Instructor, Course: Biochem 729 Advanced Topics; Graduate Level Course, Department of Biochemistry, University of Wisconsin-Madison, WI.
- 2011 and 2010 Graduate Biochemistry 710, "Regulation of Lipogenic Genes: Role of SREBP-1c". Guest Lecture, Department of Biochemistry, University of Wisconsin-Madison, WI.

- 2004–2005 Small group facilitator and study group leader, School of Medicine, West Virginia University. Course: Medical Biochemistry.
- 2002–2003 Teaching Assistant, Department of Biochemistry and Molecular Biology, West Virginia University.
Course: Biochemistry
- 08/2001–05/2002 Teaching Assistant, Department of Chemistry, University of Houston Course: Organic Chemistry.

Laboratory Mentoring and Training

Post-docs Research Co-Mentor

- 2019–Present Sayak Bhattacharya, Ph.D., Postdoctoral Researcher, UAB
- 2016–present Rajesh Gupta, Ph.D., ADA Postdoctoral Researcher, UAB

Graduate Research Co-Mentor

- 2009–2010 Sara Worzella, M.S., Genetics, University of Wisconsin-Madison
- 2011–2015 Lindsay R. Schneider, Ph.D. Candidate Pathology Graduate Program, University of Wisconsin-Madison, WI.
- 2013–2015 Mufaddal Soni, Ph.D. Candidate Biochemistry Graduate Program, University of Wisconsin-Madison, WI.
- 2019–Present Itika Arora, Ph.D. GBS Graduate Student, UAB.

Undergraduate Research Co-Mentor

- 2016–Present Christopher Truong, Trung C. Huynh, Dan Nguyen
- 2012–2015 Amber Zhou, Brooke Sample, Josh Taylor
- 2012–2013 Amber Zhou and Kaia Stroud, Medicine 699, Independent Study
- 2012–2013 Kaitlyn Waldron, Medicine 699, Independent Study
- 2012–2012 Minhui Su, Exchange student at University of Wisconsin-Madison
- 2010–2012 Ming Mu, Medicine 699, Independent Study
- 2009–2011 Nathan Truchan, Medicine 699, Independent Study
- 2009–2010 Amanda Fusilier, Medicine 699, Independent Study
- 2010–2010 Tapojyoti Das, Khorana Scholar

Press Releases

- 2011 Work featured “Diabetes gene identified: tomosyn-2 regulates insulin secretion” in several national and international media (Science Daily, USA; Press Association, UK; Times of India, India; etc.), October, 2011.
- 2008 Work featured, “WVU research shows new class of hormones may reverse diabetes and obesity: Graduate student’s presentation wins international award” Health Newsletter, October 2008, West Virginia University.

2008 Work featured, "WVU research shows new class of hormones may reverse diabetes and obesity: Graduate student's presentation wins international award" Pittsburgh PostGazette, October 2008.

Service

2019 Reviewed fellowship grants for GRD709 mock study section, UAB
2019 Reviewed late breaking abstracts for poster presentations for the American Diabetes Association conference.
2019 Pre-application Diabetes grant peer review panel, DOD
2019 Reviewed grant for Diabetes UK.
2019 Session chair for the oral presentations at American Diabetes Association conference.
2018 Reviewed abstracts for oral and poster presentations for the American Diabetes Association conference.
2018 Reviewed grant for the Ministry of Health, Jerusalem, Israel.
2018-2021 American Diabetes Association Grant Reviewer panel.
2018 UAB Department of Medicine peer-mentoring committee.
2017-Present Ad Hoc Reviewer for the following scientific journals: a) Molecular Metabolism, b) Diabetes, Obesity, and Metabolism, c) FASEB, d) PLOS one, e) Scientific Reports, f) Diabetes, g) JDRM, h) AJP.
2016 Session chair for the oral presentations at Midwest Islet Club conference.
2013, 2014 Reviewed abstracts for oral and poster presentations for the Midwest Islet Club conference.

Membership

2019-Present Endocrine Society
2017-Present Member of American Diabetes Association
2017-Present Member of ASBMB

Oral Presentations

1. Gupta, R and **Bhatnagar, S**. An alpha-cell secreted protein, complement 1q like-3 inhibits insulin secretion via BAI3 adhesion G-protein coupled receptor from pancreatic beta-cells. Midwest Islet Club Conference, St. Louis, Missouri, May, 2018.
2. **Bhatnagar, S**. From genetics and bioinformatics to function: identification and characterization of novel protein inhibitors of insulin secretion. Department of Physiology, Johns Hopkins University, MD. March 28, 2018.
3. **Bhatnagar, S**. The complement 1q-Like 3 secreted protein acts as an inhibitor of insulin secretion from pancreatic β cells. Keystone Symposia on the Frontiers of Islet Biology, Keystone, CO, February 4–8, 2018.
4. Huynh, T.C., Truong, C., Gupta, R., Schueler, K., Attie, A.D., and **Bhatnagar, S**. Synaptotagmin-9 regulates tomosyn-2 protein abundance to affect early phase of insulin secretion. Boshell Diabetes Research Day, Auburn, AL, February 16, 2018.

5. Gupta, R., Koltres, J.E., and **Bhatnagar, S.** The complement 1q-like 3 secreted protein inhibits insulin secretion by G-protein coupled receptor, BAI3 from pancreatic β -cells. Boshell Diabetes Research Day, Auburn, AL, February 16, 2018.
6. Huynh TC, Gupta R, **Bhatnagar S.** Regulatory mechanism of the early phase of insulin secretion by tomosyn. UA Systems Honors Research Day, Tuscaloosa, AL, February 3, 2018.
7. Huynh, T.C., Gupta, R., **Bhatnagar, S.** Synaptotagmin-9 regulates tomosyn protein abundance to affect early phase of insulin secretion. UAB Fall Research Expo, Birmingham, AL, November 30, 2017.
8. **Bhatnagar, S.** C1q13 antagonizes GLP-1-induced insulin secretion by Bai3 adhesion G-protein coupled receptor in pancreatic beta cells. American Diabetes Association Conference: 77nd Scientific Sessions, San Diego, CA, June 9–13, 2017. C1q13 antagonizes GLP-1-induced insulin secretion by Bai3 adhesion G-protein coupled receptor in pancreatic beta cells. American Diabetes Association Conference: 77nd Scientific Sessions, San Diego, CA, June 9–13, 2017. **(Top Scoring Abstract)**
9. Huynh, T.C., Truong, C., Gupta, R., Schueler, K., Attie, A.D., and **Bhatnagar, S.** Synaptotagmin 9 regulates tomosyn-2 protein abundance to affect early phase of insulin secretion. Midwest Islet Club Conference, Madison, WI, May, 2017.
10. Gupta, R., Koltres, J.E., and **Bhatnagar, S.** C1q13 antagonizes GLP-1 induced insulin secretion by Bai3 adhesion G-protein coupled receptor in pancreatic beta cells. Midwest Islet Club Conference, Madison, WI, May, 2017.
11. Gupta, R., Huynh, T.C., Truong, C., Nguyen, D., and **Bhatnagar S.** An islet secreted protein, C1q13 inhibits GLP-1 induced insulin secretion via Bai3 adhesion G-protein coupled receptor from beta cells. Boshell Diabetes and Metabolic 10th Annual Research Day, Auburn University, AL, March 3rd, 2017.
12. Gupta, R., and **Bhatnagar, S.** C1q13 antagonizes GLP-1 induced insulin secretion by Bai3 adhesion G-protein coupled receptor in pancreatic beta cells. UAB Diabetes Research Day, Birmingham, AL, May 2nd, 2017.
13. **Bhatnagar, S.** Phosphorylation and degradation of tomosyn-2 de-represses insulin secretion Boshell Diabetes and Metabolic 9th Annual Research Day, Auburn University, AL, Feb 26th, 2016.
14. **Bhatnagar, S.** Phosphorylation and degradation of tomosyn-2 de-represses insulin secretion Midwest Islet Conference, Chicago, May 20–21, 2015.
15. **Bhatnagar, S.** Identifying and characterizing novel regulators of insulin secretion. Seminar at the Department of Molecular Medicine, University of South Florida, Tampa, FL, January 14, 2015.
16. **Bhatnagar, S.** Identifying and characterizing novel regulators of insulin secretion. Seminar at the Obesity and Diabetes Center, University of Louisville, Louisville, KY, December 5, 2014.
17. **Bhatnagar, S.** Identifying and characterizing novel regulators of insulin secretion. Seminar at the Comprehensive Diabetes Center, University of Alabama at Birmingham, Birmingham, AL, November 6, 2014.
18. **Bhatnagar, S.** Identifying and characterizing novel regulators of insulin secretion. Faculty Seminar at the School of Biology, Georgia Institute of Technology, Atlanta, GA, August 21, 2014.
19. **Bhatnagar, S.** Identifying and characterizing novel regulators of insulin secretion. Spring Seminar Series, Department of Biochemistry, West Virginia University, Morgantown, WV, February 26, 2013.
20. **Bhatnagar, S.** Positional cloning of a type 2 diabetes quantitative trait locus: *tomosyn-2*, a negative regulator of insulin secretion. Membrane Protein/Trafficking Seminar Series. Bock Laboratories, University of Wisconsin-Madison, WI, May 17, 2012.

21. **Bhatnagar, S.** Positional cloning of a type 2 diabetes quantitative trait locus; Tomosyn-2, a negative regulator of insulin secretion. The Midwest Islet Club Conference, University of Wisconsin-Madison, Madison, WI, May 25–27, 2011.
22. **Bhatnagar, S.** Fibroblast Growth Factor-19: A novel factor for inhibiting fatty acid synthesis. E.J. Van Liere Research Convocation and Research Day, West Virginia University, WV, 2008.
23. **Bhatnagar, S.** New insights in eukaryotic transcription termination. Department of Biochemistry and Molecular Pharmacology, West Virginia University, WV, 2005.
